

Adaptive Planning Quiz

1. One of the various essential levels involved in agile project planning include which of these?
 - A. Strategic planning.
 - B. Logical planning.
 - C. Initiative planning.
 - D. None of the above.

2. Agile sizing and estimation involves which of these necessary steps prior to reaching completion?
 - A. Making use of progressive elaboration to estimate project efforts more accurately.
 - B. Updating the team capacity to factor in maintenance and operations demands.
 - C. Making initial rough estimate range on scope, schedule and cost at the very beginning of the project based on the high level requirements to kick off the project.
 - D. All of the above.

3. All of these are part of agile core project management phases employed in the development of a project except _____
 - A. Brainstorming.
 - B. Envisioning.
 - C. Speculating.
 - D. Exploring.

4. Which of the following agile planning stages implies the creation of a document, describing the high-level product requirements and the timeframes for deliverables, providing a visual overview of all the planned releases and major components?
 - A. Product vision.
 - B. Product road map.
 - C. Release plan.
 - D. Sprint/ Iteration plan.

5. Which type of iteration involves the carrying out of tasks before the actual development work begins for technical and architectural setup and gathering initial requirements into the backlog?
 - A. Iteration O
 - B. Iteration H
 - C. Iteration P
 - D. None of the above.

6. The Release planning aspect of agile project management implies which of the following?
- A. Hardening iteration which is a time used to test and prepare the launch software.
 - B. involves scheduling development at high level about features and iterations.
 - C. A planning meeting to be attended by project team and stakeholders to discuss project related issues.
 - D. None of the above.
7. Which of these is a meeting scheduled at the end of each sprint to be attended by team members only, in order to discuss improvements on product and process to enhance efficiency and effectiveness?
- A. Sprint Retrospective.
 - B. Sprint Review.
 - C. Lessons.
 - D. All of the above.
8. In a traditional project management, when is a lesson learned meeting carried out?
- A. End of the meeting.
 - B. Some moment before the meeting.
 - C. During the meeting.
 - D. All of the above.
9. Which of the followings is among agile Planning Artifacts and Meetings?
- A. Product vision.
 - B. Product road map.
 - C. Personas.
 - D. All of the above.
10. A tool used in requirement collection and testing in which realistic depiction of likely users for the product are created, these users can be real or fictitious is_____
- A. Extreme Persona.
 - B. Persona.
 - C. Wireframes.
 - D. Release Plan.

Answer Key

1. One of the various essential levels involved in agile project planning include which of these?
 - A. Strategic planning.
 - B. Logical planning.
 - C. Initiative planning.
 - D. None of the above.
 - A. Strategic planning. Choices B, C, and D are incorrect for this question.**

2. Agile sizing and estimation involves which of these necessary steps prior to reaching completion?
 - A. Making use of progressive elaboration to estimate project efforts more accurately.
 - B. Updating the team capacity to factor in maintenance and operations demands.
 - C. Making initial rough estimate range on scope, schedule and cost at the very beginning of the project based on the high level requirements to kick off the project.
 - D. All of the above.
 - D. All of the aforementioned steps are essential. Choice A, B or C only is incorrect for this question.**

3. All of these are part of agile core project management phases employed in the development of a project except _____
 - A. Brainstorming.
 - B. Envisioning.
 - C. Speculating.
 - D. Exploring.
 - A. Brainstorming. Choices B, C, and D are incorrect for this question.**

4. Which of the following agile planning stages implies the creation of a document, describing the high-level product requirements and the timeframes for deliverables, providing a visual overview of all the planned releases and major components?
 - A. Product vision.
 - B. Product road map.
 - C. Release plan.
 - D. Sprint/ Iteration plan.
 - B. Product road map. A, C, and D are incorrect for this question.**

5. Which type of iteration involves the carrying out of tasks before the actual development work begins for technical and architectural setup and gathering initial requirements into the backlog?

- A. Iteration O
- B. Iteration H
- C. Iteration P
- D. None of the above.
- A. Iteration O. Choices B, C, and D are incorrect for this question.**

6. The Release planning aspect of agile project management implies which of the following?

- A. Hardening iteration which is a time used to test and prepare the launch software.
- B. involves scheduling development at high level about features and iterations.
- C. A planning meeting to be attended by project team and stakeholders to discuss project related issues.
- D. None of the above.
- B. Scheduling development at high level about features and iterations.**

7. Which of these is a meeting scheduled at the end of each sprint to be attended by team members only, in order to discuss improvements on product and process to enhance efficiency and effectiveness?

- A. Sprint Retrospective.
- B. Sprint Review.
- C. Lessons.
- D. All of the above.
- A. Sprint Retrospective. Choices B, C, and D are incorrect for this question.**

8. In a traditional project management, when is a lesson learned meeting carried out?

- A. End of the meeting.
- B. Some moment before the meeting.
- C. During the meeting.
- D. All of the above.
- A. End of the meeting. Choices B, C, and D are incorrect for this question.**

9. Which of the followings is among agile Planning Artifacts and Meetings?

- A. Product vision.
- B. Product road map.
- C. Personas.
- D. All of the above.
- D. All of the aforementioned are parts of agile planning artifacts. Choice A, B, and C are incorrect for this question.**

10. A tool used in requirement collection and testing in which realistic depiction of likely users for the product are created, these users can be real or fictitious is_____

A. Extreme Persona.

B. Persona.

C. Wireframes.

D. Release Plan.

B. Persona. Choices A, C, and D are incorrect for this question.
